New human antibody specific for treat disorders characterized multiple sclerosis for human interleukin-12 (IL-12) used to ed by aberrant IL-12 expression e.g. Crohn's

Claim 75; Page 121; 377pp; English.

This invention relates to a new human antibody specific for human CC interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences AAB3948-B39516 represent human CC anti-IL-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC amino acid sequences. Other variable region and sequences are CC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39712-B39771 CC represent anti-IL-12 CDR3 related amino acid sequences AAB39712-B40063 CC represent other CDR sequences. Light chain CDR3 consensus sequences are CC given in AAB40064-B40067. Primers used in the identification and CC Construction of the antibodies of the invention are given in AAB40064-B40067. Primers used in the identification and CC AAC61062-CS1071. The antibody of the invention are given in CC AAC61062-CS1071. The antibody of the invention is a neutralising CC antibnody and has antirheumatic; antiarthritic; antisclerotic; CC antisflammatory; neuroprotective, antisportatic; antisathmatic; CC cardiant; antiparastic; antisathmatic; antibodies or antigen-binding framences are useful in the treatment confidence of antiparastic activity. The antibodies or antigen-binding framence are useful in the treatment of Alsovabera accordance with Acettiments are useful in the treatment of Alsovabera accordance with Acettiments are useful in the treatment of Alsovabera accordance with Acettiments are useful in the treatment of Alsovabera accordance with Acettiments are useful in the treatment of Alsovabera accordance with Acettiments are useful. of disorders associated with detrimental release of human IL-12, percentally Crohn's disease, multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition to treat human IL-12 disorders. pharmaceutical composition the treatment IL-12,

New human antibody specific for human interleukin-12 (IL-12) used to treat disorders characterized by aberrant IL-12 expression e.g. Crohn's disease and multiple sclerosis

Claim 75; Page 121; 377pp; English.

AAC61062-C61071. The antibody of the invention is a neutralising antibody and has antirheumatic; antiarthritic; antisclerotic; antiinflammatory; neuroprotective; antiscriatic; antiasthmatic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antigen-binding fragments are useful in the treatmen of disorders associated with detrimental release of human IL-12, region (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39561-B39771 represent anti-IL-12 CDR3 related amino acid sequences, AAB39772-B40063 represent other CDR sequences. Light chain CDR3 consensus sequences given in AAB40064-B40067. Primers used in the identification and construction of the antibodies of the invention are given in especially Crohn's disease, multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences AAB39485-B39516 represent human anti-IL-12 antibody heavy and light chain complementarity determining human in the treatment

                                                                                                                                                                                                                                                                                                                                                                                                                                                                              anti-IL-12 antibody heavy and light chain complementarity determining cregion (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences are given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39561-B39771 represent other CDR sequences. Light chain CDR3 consensus sequences are given in AAB40064-B40067. Primers used in the identification and construction of the antibodies of the invention are given in AAC61062-C61071. The antibody of the invention are given in AAC61062-C61071. The antibody of the invention is a neutralising antiinflammatory; neuroprotective; antiarthritic; antisclerotic; antiinflammatory; neuroprotective; antipporiatic; antisethmatic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antigen-binding fragments are useful in the treatment of disorders associated with detrimental release of human II-12, respectively.

                                                                                                                                                                                                                                                                                                                                                                                                                                                             C anti-II-12 antibody heavy and light chain complementarity determining cregion (CDR) amino acid sequences, and also includes variable region camino acid sequences. Other variable region and sequences are given in ABB39517-B39560 and ABB40068-B40149. Sequences ABB39561-B39771 CC represent anti-II-12 CDR3 related amino acid sequences, ABB39561-B39771 CC represent other CDR sequences. Light chain CDR3 consensus sequences are CC given in ABB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in ABG1062-C61071. The antibody of the invention is a neutralising CC antibody and has antirheumatic; antiasthritic; antisclerotic; antibody and has antirheumatic; antisporiatic; antisclerotic; antiasthmatic; CC cardiant; antiparasitic; antibacterial and immunosuppressive activity. The antibodies or antigen-binding fragments are useful in the treatment CC of disorders associated with detrimental release of human II-12.

CC anti-II-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC amino acid sequences. Other variable region amino acid sequences are CC given in ARB39517-B39560 and ARB40068-B40149. Sequences ARB39561-B39771 CC represent anti-II-12 CDR3 related amino acid sequences AAB3972-B40063 CC represent other CDR sequences. Light chain CDR3 consensus sequences are CC given in ARB40064-B40067. Primers used in the identification and CC construction of the antibodies of the invention are given in ARB4064-B40067. Primers used in the identification and CC antibody and has antirhematic; antiarthritic; antisclerotic; antibody and has antirhematic; antiarthritic; antisclerotic; antisclerotic; antibody and has antirhematic; antispsoriatic, antischmatic; CC cardiant; antiparastic; antisclerotic; antisclerotic; antibodies or antigen-binding fragments are useful in the treatment CC of disorders associated with detrimental release of human II-12. CC They can also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical composition and also be used in the manufacture of a pharmaceutical compositi

IL-12 disorders.

```
This invention relates to a new human antibody specific for human CC interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences AAB39485-B39516 represent human CC anti-IL-12 antibody heavy and light chain complementarity determining CC region (CDR) amino acid sequences, and also includes variable region CC amino acid sequences. Other variable region amino acid sequences are GC given in AAB39517-B39560 and AAB40068-B40149. Sequences AAB39772-B40063 represent other CDR sequences. Light chain CDR3 consensus sequences are GC given in AAB40067. Perimers used in the identification and CC construction of the antibodies of the invention are given in AAB40067. The antibody of the invention is a neutralising CC antibody and has antirheumatic; antiarthritic; antiasthmatic; CC antibody and has antirheumatic; antiarthritic; antiasthmatic; CC antibodies or antigen-binding fragments are useful in the treatment CC of disorders associated with detrimental release of human IL-12, GC especially Crohn's disease, multiple sclerosis and rheumatoid arthritis. CC They can balso be used in the manufacture of a pharmaceutical composition
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New human antibody specific for human interleukin-12 (IL-12) used to treat disorders characterized by aberrant IL-12 expression e.g. Crohn's disease and multiple sclerosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Kaymakcalan Z, Labkovsky

cc anti-IL-12 antibody heavy and light chain complementarity determining cregion (CDR) amino acid sequences, and also includes variable region amino acid sequences. Other variable region amino acid sequences other carriable region amino acid sequences action amino acid sequences according to the complementarity. Bayson and Aba40068-B40149. Sequences Aba39561-B39771 crepresent anti-IL-12 CDR3 related amino acid sequences, Aba39572-B40063 crepresent other CDR sequences. Light chain CDR3 consensus sequences are cylone in Aba40067. Primers used in the identification and construction of the antibodies of the invention are given in AAC61062-C61071. The antibody of the invention is a neutralising cantibody and has antirheumatic; antipsoriatic; antisclerotic; antilinfiammatory; neuroprotective; antipsoriatic; antisclerotic; antilinfiammatory; neuroprotective; antipsoriatic; antischematic; cardiant; antiparasitic; antibacterial and immunosuppressive activity. CC The antibodies or antigen-binding fragments are useful in the treatment cof discorders associated with detrimental release of human IL-12, capacity crohn's disease, multiple sclerosis and rheumatoid arthritis. They can also be used in the manufacture of a pharmaceutical composition contents the composition contents are according to the manufacture of a pharmaceutical composition contents the contents the composition contents the contents the contents the contents the composition contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents the contents 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a new human antibody specific for human interleukin-12 (IL-12). The invention also includes antigen binding portions that bind to IL-12. Sequences AAB39485-B39516 represent human

The present sequence represents the light chain variable region of CC human antibody 10D1. This antibody specifically binds to human CC cytotoxic T lymphocyte associated antigen 4 (CTLA-4). Such antibodies CC are used in methods for inducing, augmenting or prolonging an immune CC response to an antigen in a patient, where the antibodies block CC binding of human CTLA-4 to human B7 ligands. The antibodies are CC also useful for treating autoimmune disease in a subject caused or CC exacerbated by increased activity of T cells and for treating prostate CC cancer, melanoma or epithelial cancer. A polyvalent or polycional CC exacerbated to comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for CC treating cancer, infectious diseases and promoting beneficial autoimmune CC treating autoimmune diseases with inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia CC dishere melitine translant response is sclerosis, insulin-dependent cf dishere melitine translant response in the inflammatory or allergic components. The polyvalent or polyclonal preparations are useful for treating autoimmune diseases such as rheumatoid arthritis, myasthenia CC dishere melitine translant response in fifteentic.

The present sequence represents the heavy chain variable region of human antibody 3-30.3. This antibody specifically binds to human cytotoxic T lymphocyte associated antigen-4 (CTLA-4). Such antibodies are used in methods for inducing, augmenting or prolonging an immune response to an antigen in a patient, where the antibodies block binding of human CTLA-4 to human B7 ligands. The antibodies are also useful for treating autoimmune disease in a subject caused or exacerbated by increased activity of T cells and for treating prostate cancer, melanoma or epithelial cancer. A polyvalent or polyclonal antibody preparation comprising two antibodies of the invention are useful for suppressing a immune response in a patient. They are used for treating cancer, infectious diseases and promoting beneficial autoimmune reactions for the treatment of diseases with inflammatory or allergic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel human sequence antibody that binds to human cytotoxic lymphocyte associated antigen-4, useful for inducing, augment prolonging immune response to antigen or for suppressing immune response in patient
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cytotoxic T lymphocyte associated antigen-4; CTLA-4; B7 ligand; cancer; autolimune disease; inflectious disease; inflammation; allergy; rheumatoid arthritis; myasthemia gravis; lupus erythematosus; multiple sclerosis; insulin-dependent diabetes mellitus; inflammation;
